'When you have to meet the standards'

Sectional view of steel rib and duct construction

Why buy 'multi-purpose' flexible duct for your evaporative cooling system when you can have one that was specifically designed for it.

QS-Flex

QS-Flex

The Quiet Companion

QS-Flex was designed to give not only the lowest possible noise factor in ducted evaporative cooling systems but a greater product life. The QS-Flex inner liner absorbs noise and vibration to give ultra quiet air flow into each room.

The tough, tear and puncture resistant outer jacket forms a vapour barrier. Constructed of re-inforced silver-metallized polyester, the outer jacket is not only fire resistant but is not subject to UV degradation of breakdown ensuring optimum life of the product.

Tough and durable

- QS-Flex's inner core material is a spun bonded, non woven fibre that can stand extreme temperature changes without damage.
- This material is mechanically locked into an outer steel rib by a copper coated spring steel wire. (See front of brochure for diagram).
- QS-Flex will not collapse, tear or split eliminating expensive service calls and replacement duct*.
- QS-Flex is insulated with a user friendly, safe polyester fibre blanket. Available in two insulation weights and thicknesses - 250 grams per m² at 40mm thick as standard. - 450 grams per m² at 70mm thick on application.

All insulation used by Westaflex / Uniflex on their flexible duct complies to Australian Insulation Standard AS 4508. Copies of test reports available at all Sales Outlets.

Superior Choice

When you consider that QS-Flex:

- Has an Australian Design Award.
 - Meets Australian Insulation Standard AS 4508.
 - Meets Australian Fire Standard AS 4254
 - Has a 25 Year Warranty, the longest in Australia.
- You'll realise why QS-Flex proves that it is the superior choice in ultra quiet evaporative cooling ducting.

Peace of Mind

Westaflex / Uniflex's commitment to research and development, technical service and quality assurance is reflected in being awarded SEVEN Australian Design Awards, ONE Australian Design Mark and ONE Consensus Manufacturing Award. Consider the additional advantage of total peace of mind when selecting products supported by an organisation that is totally committed to quality.

The bitterness of poor quality remains long after the sweetness of a low price has been forgotten.

**When installed to manufacturers specifications.*

Compare our reports to that of other companies.

*Copies of these reports are available on request
