*'When you have to meet the standards'*

# CD 2000

# CD 2000

## Quality Materials

Manufactured from fire retarded, V-Zero A.B.S. plastic, the **CD 2000** diffuser is resistant to scratches, abrasions and fading. The injection moulding process eliminates all seams and joins giving an unsurpassed finish and as the colour is “moulded in” giving an almost unlimited life. By utilising high grade plastics we have been able to reduce the “cold bridging” effect of heat transmission through the diffuser. This is where metal diffusion can condensate or “sweat” due to high humidity in some climates.

## Easy Installation

The unique snap-on adaptor system, available with or without balancing dampers and the simplistic “one touch” ceiling fixing clips can significantly reduce installation time. The bevelled edge profile of the **CD 2000** blends in with all ceiling types, while the “one touch” 1/2 tiled commercial type comes standard to suit both imperial and metric ceilings.

## The Perfect Component

Whether it is a high rise commercial building, a domestic dwelling in the suburbs or a small town house in the inner city, the **CD 2000** will compliment any decor.

For more information on the **CD 2000** ceiling diffuser contact your local Westaflex/Uniflex outlet.
