Q-Flex

Sectional view of steel rib and duct construction

Why buy a "multi purpose" flexible duct for your evaporative cooling system when you can have one that was specifically designed for it.

Q-Flex

The Quiet Companion

Q-Flex was designed to achieve the lowest possible noise factor in evaporative ducted systems. The Q-Flex inner liner absorbs noise and vibrations to give an ultra-quiet air flow into each room, and just quietly, it received an Australian Design Award.

Made To Last

The secret, No Glue! If installed to manufacturers specifications Q-Flex will never unravel, split, tear or collapse thus eliminating the expensive service calls and replacement of ducts.

Strong Companion

The acoustic quality of Q-Flex is an added bonus to the strength and long-lasting qualities that ensure years of service.

- The inner liner is made from tough, durable spun bonded fibre core that is mechanically locked into the outer steel rib by a copper coated spring steel wire.
- Q-Flex is insulated with a user friendly, safe polyester fibre blanket. Available in two insulation weights and thicknesses - 250 grams per m² at 40mm thick as standard.
- 450 grams per m² at 70mm thick on application.

All insulation used by Westaflex / Uniflex on their flexible duct complies to Australian Insulation Standard AS 4508.

- An outer jacket of tough, tear and puncture resistant U.V. stabilised polyethylene that forms the outer vapour barrier.

Superior Choice

When you consider that Q-Flex:

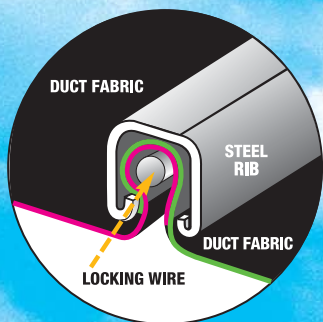

- Has an Australian Design Award.
 - Meets Australian Insulation Standard AS 4508.
 - Meets Australian Fire Standard AS 1530 part 3.
- You'll realise why Q-Flex proves that it is the superior choice in ultra quiet evaporative cooling ducting.

Peace of Mind

Westaflex / Uniflex's commitment to research and development, technical service and quality assurance is reflected in being awarded SEVEN Australian Design Awards, ONE Australian Design Mark and ONE Consensus Manufacturing Award. Consider the additional advantage of total peace of mind when selecting products supported by an organisation that is totally committed to quality.

The bitterness of poor quality remains long after the sweetness of a low price has been forgotten.
